LOGGIE · MOBILE UI OVERHAUL

Every screen & overlay, built for phones.

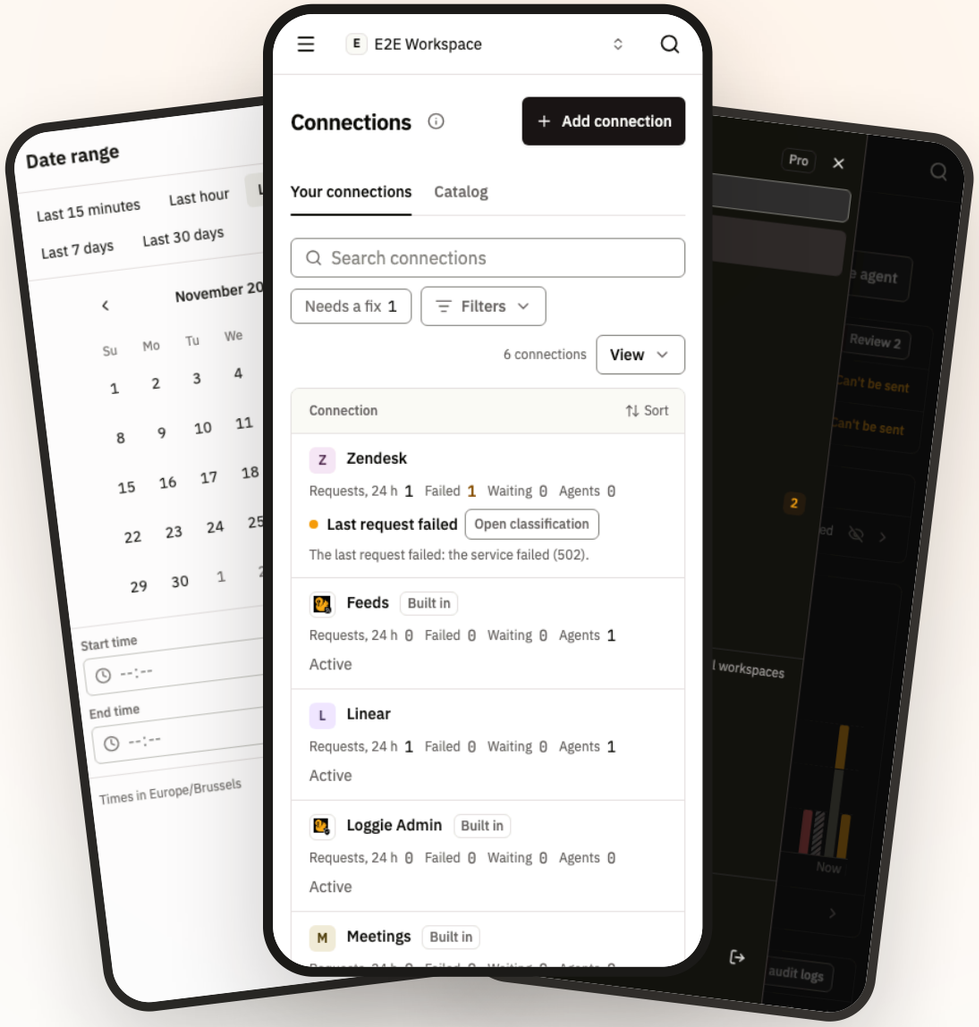

A full-app responsive pass across tables, navigation, sheets, dialogs, and charts — tested from **320px** to **1440px** in light and dark themes with zero desktop regressions.

01 / NAVIGATION

Mobile Navigation Drawer

All 11 destinations and account controls now fit cleanly above the fold at 390×844.

BEFORE (MAIN)

A 5-row stacked footer consumed nearly half the drawer, cutting off all 4 **Loggie admin** links with no scroll cue.

AFTER

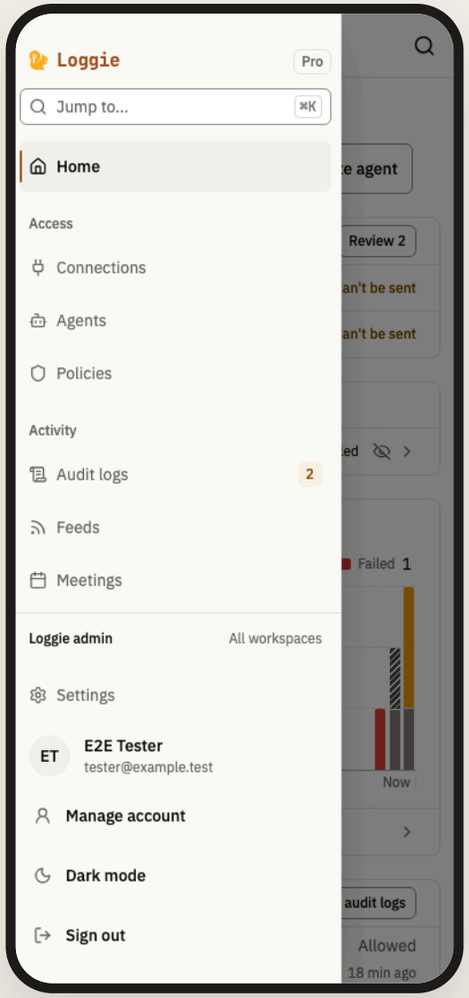

Compact single-row **44px** footer (account button + theme toggle + sign out with 44px center-to-center spacing) surfaces every link cleanly in light & dark mode.

SHORT PHONES (320PX / 375PX)

Portal-aware `ResizeObserver` adds a subtle bottom scroll fade whenever nav groups overflow.

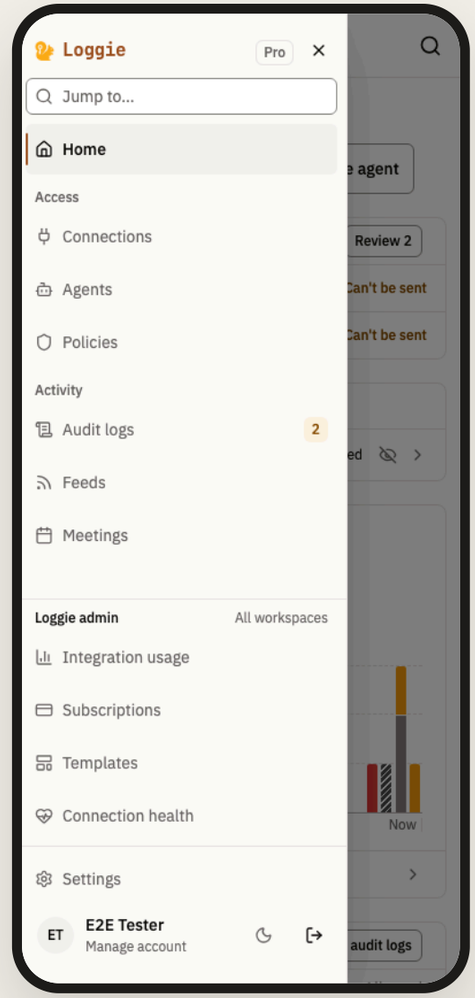

BEFORE · MAIN

390×844 · Admin links cut off

AFTER

390×844 · All 11 links visible

02 / DATA TABLES

Connections List

Cramped desktop columns replaced by a scannable stacked card layout with full actions.

BEFORE (MAIN)

Two-column table truncated status to *"Last re…"*, sliced the **"Open c…"** CTA button off the right edge, and hid all request/agent metrics.

AFTER

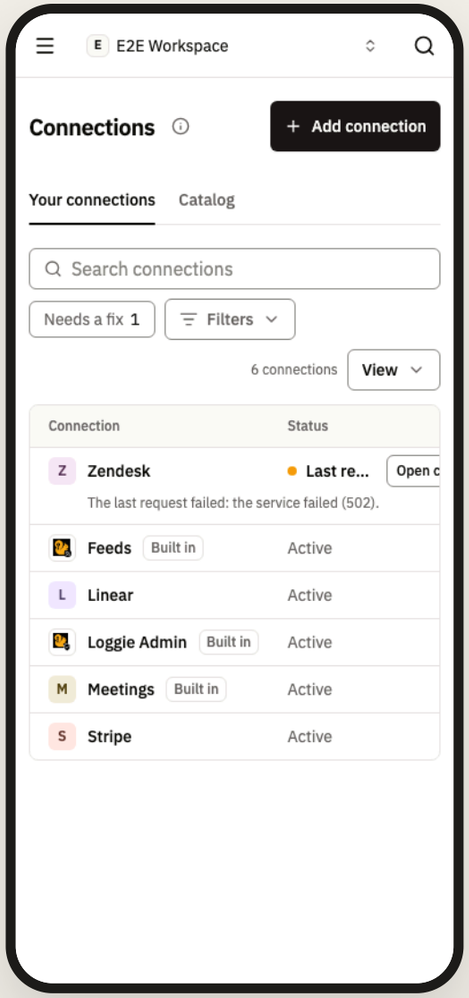

Stacked phone `DataTable` shows full status, unclipped **Open classification** CTA, inline telemetry (Requests, Failed, Waiting, Agents), and a compact **Sort** menu.

ACCESSIBLE BY DEFAULT

Mobile labels are real DOM text (not CSS pseudo-elements), paired with `sr-only` column headers and matching `aria-colindex`.

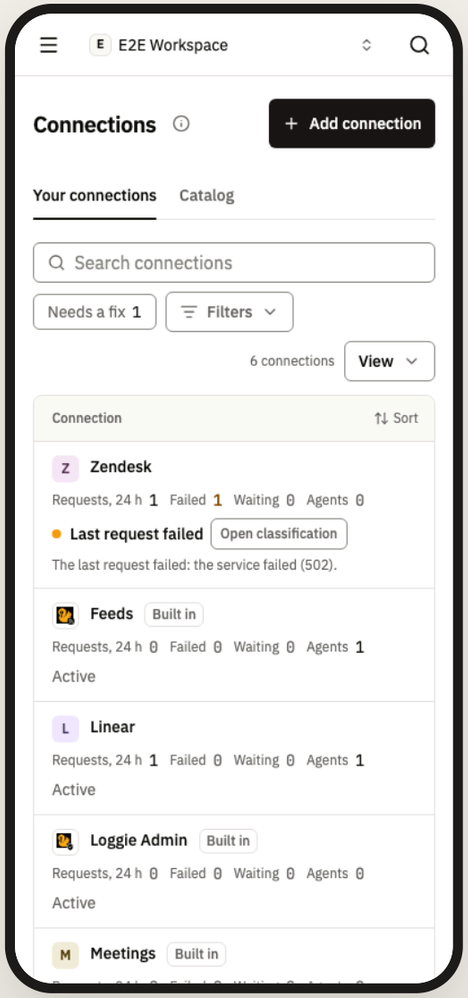

BEFORE · MAIN

390×844 · Button clipped right

AFTER

390×844 · Stacked card + full CTA

03 / OVERLAYS & PICKERS

Date Range Picker

Desktop dual-month popover promoted to a dedicated full-width mobile sheet.

BEFORE (MAIN)

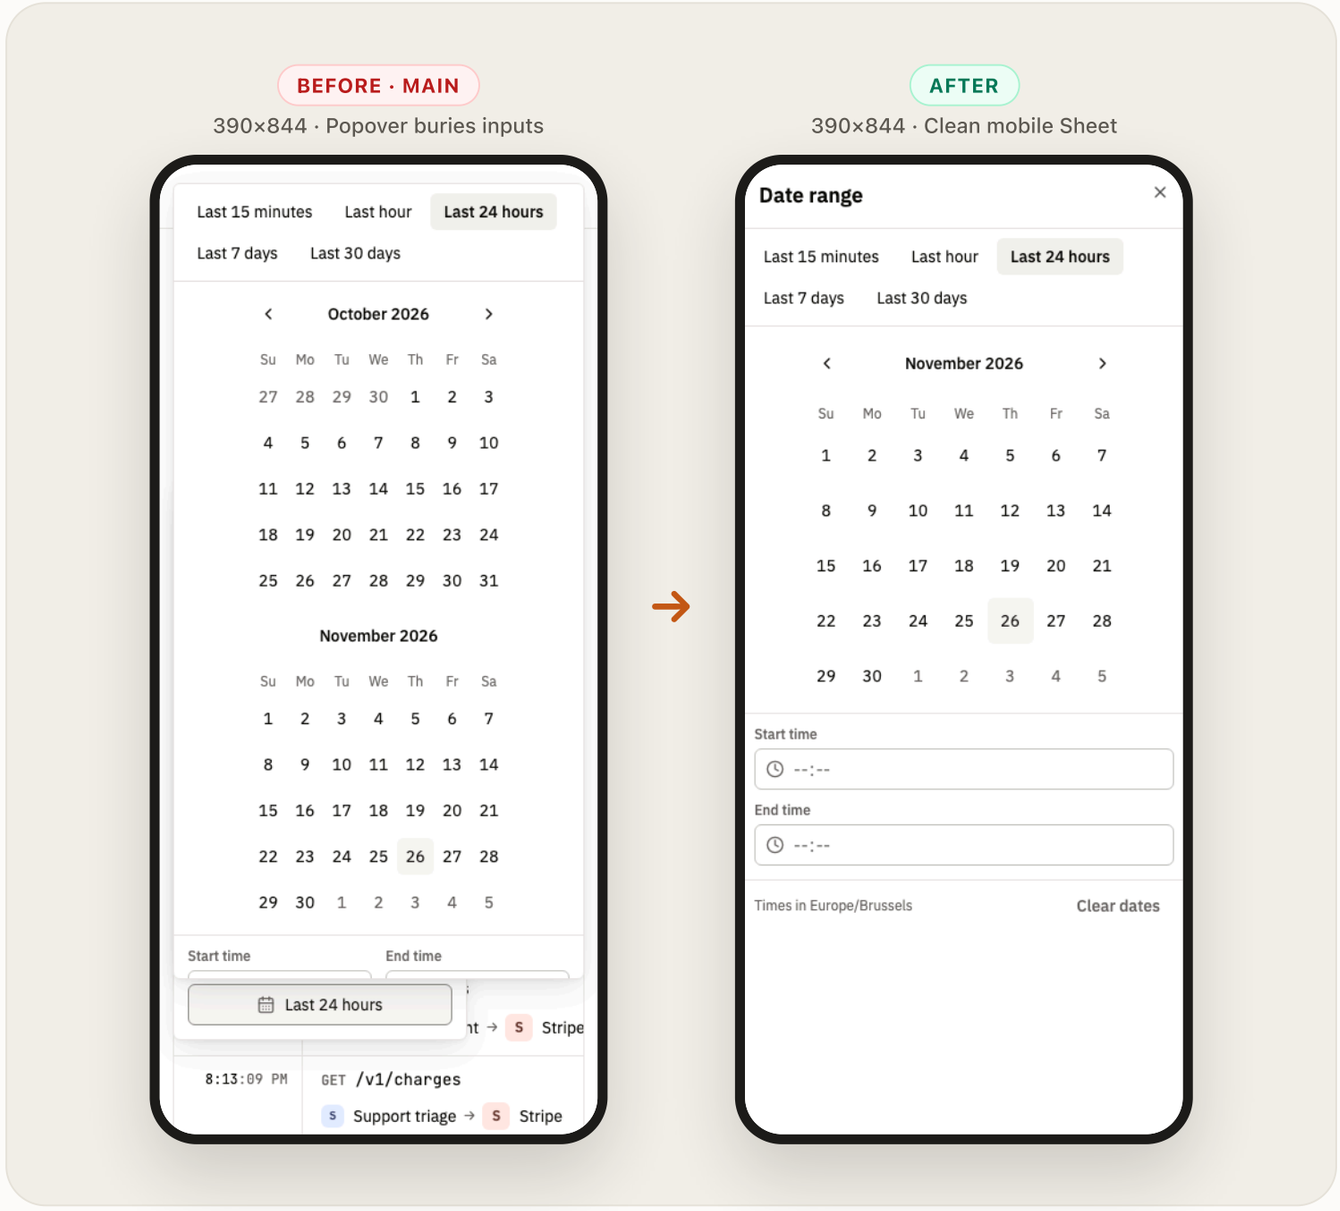

A tall 2-month floating popover collided directly into the open Filters panel — burying **Start time**, **End time**, and clear actions behind the trigger.

AFTER

Opens in a full-width mobile `Sheet` with a single-month calendar, clean full-width time inputs with clock icons, timezone caption, and clear action.

BREAKPOINT-AWARE

Driven by shared `PHONE_WIDTH_QUERY` — desktop keeps the instant dual-month popover unchanged.

04 / ACTIVITY & TELEMETRY

Audit Logs (Light & Dark)

Eliminates horizontal crowding on request rows while surfacing status and agent-to-connection flow.

BEFORE (MAIN)

Fixed `Time | Request` grid pushed *"Finance assistant → Stripe"* right into the card border while hiding decision badges.

AFTER

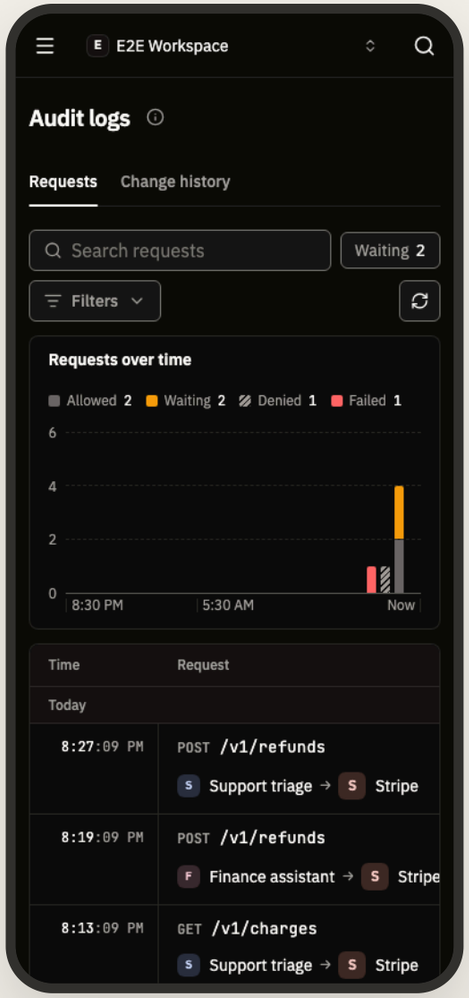

Full-width stacked rows give endpoints, agents, connections, and outcomes room to breathe — with a 2-column **44px** chart legend above.

FULL THEME PARITY

Verified in both light and dark modes, alongside full-width mobile record drawers.

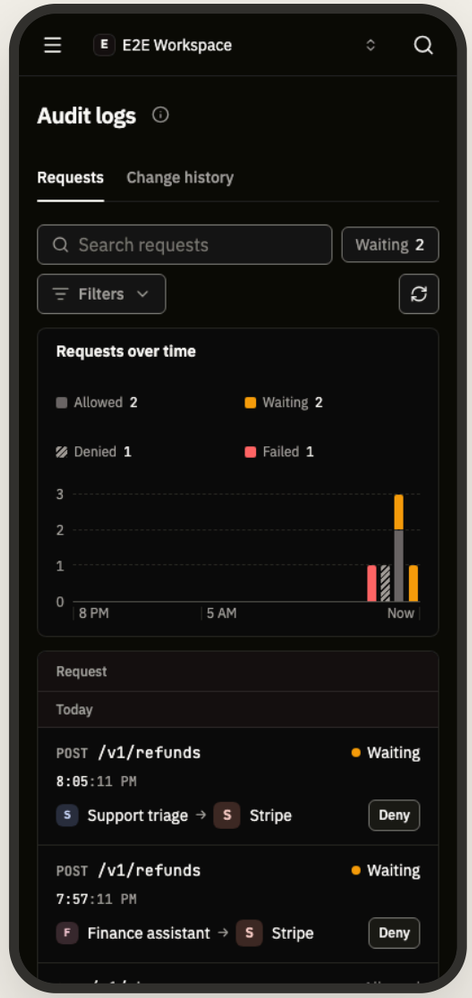

BEFORE · DARK

390×844 · "Stripe" clipped right

AFTER · DARK

390×844 · Stacked rows + 44px legend

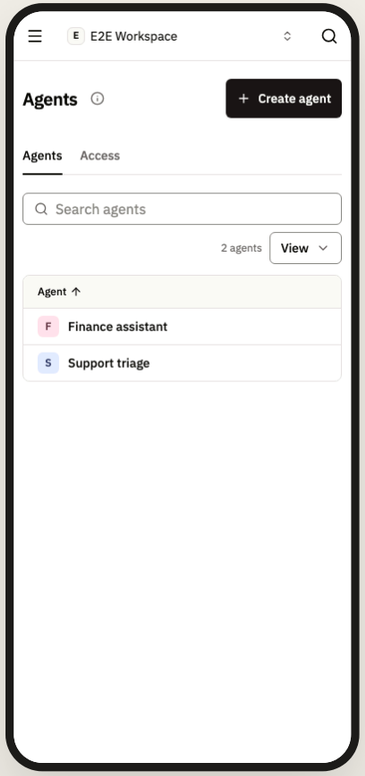

05 / STACKED DATATABLE ROLLOUT

Agents & Policies — Context Restored on Phone

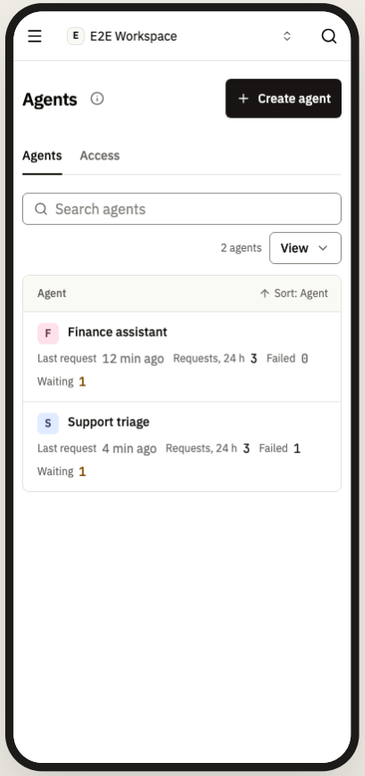

Previously mobile hid every secondary column, leaving bare name lists. Now each row surfaces actionable metrics and sorting.

Agents

BEFORE

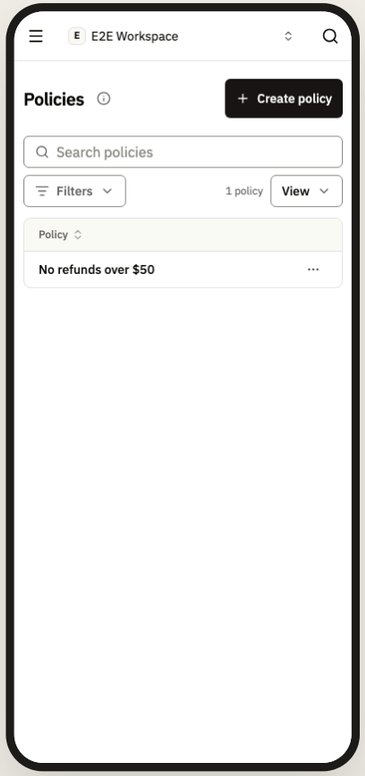

AFTER

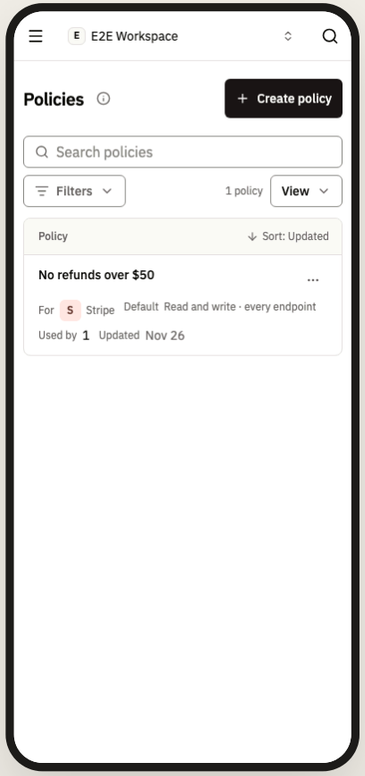

Surfaces **Last request**, **24h volume**, **Failed**, and **Waiting** counts + sort menu.

Policies

BEFORE

AFTER

Reveals target **Connection**, **Default rule**, **Used by** count, and **Updated** date.

06 / BILLING & COMPARISON

Plans & Billing

Replaces a clipped multi-column comparison grid with clean stacked plan cards below 768px.

BEFORE (MAIN)

Desktop comparison table rendered an empty left label column beside a sliced *"Try the proxy workfl…"* card off the right viewport edge.

AFTER

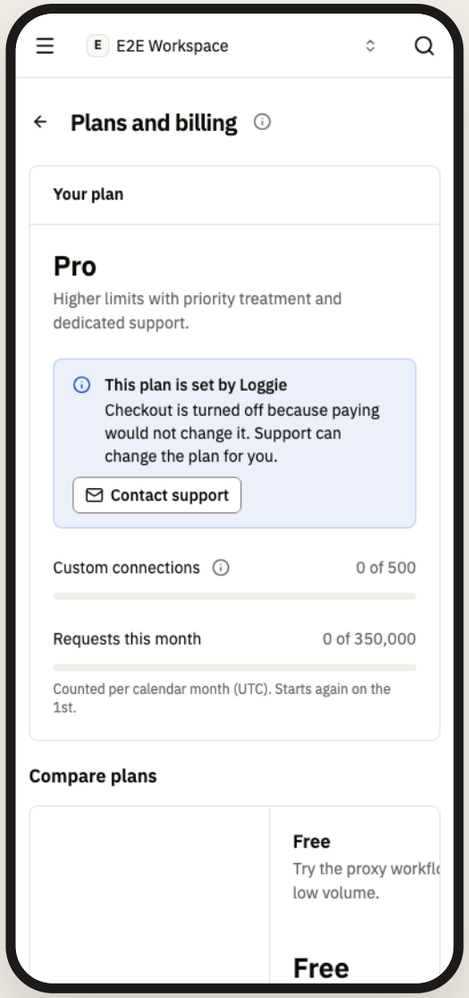

Uses shared `STACKED_BELOW_MD_QUERY` to switch to full-width stacked plan cards (Free, Plus, Pro) with clear key-value feature rows.

ZERO HORIZONTAL SCROLL

Verified down to **320px** width in both light and dark modes.

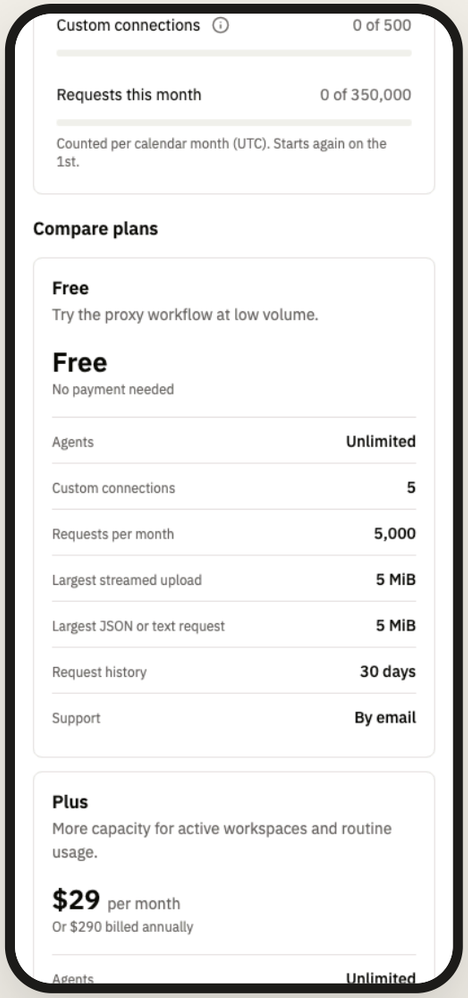

BEFORE · MAIN

390×844 · Comparison grid clipped

AFTER

390×844 · Stacked Compare plans cards

07 / COMPACT VIEWPORT STRESS TEST

Home Dashboard at 320px

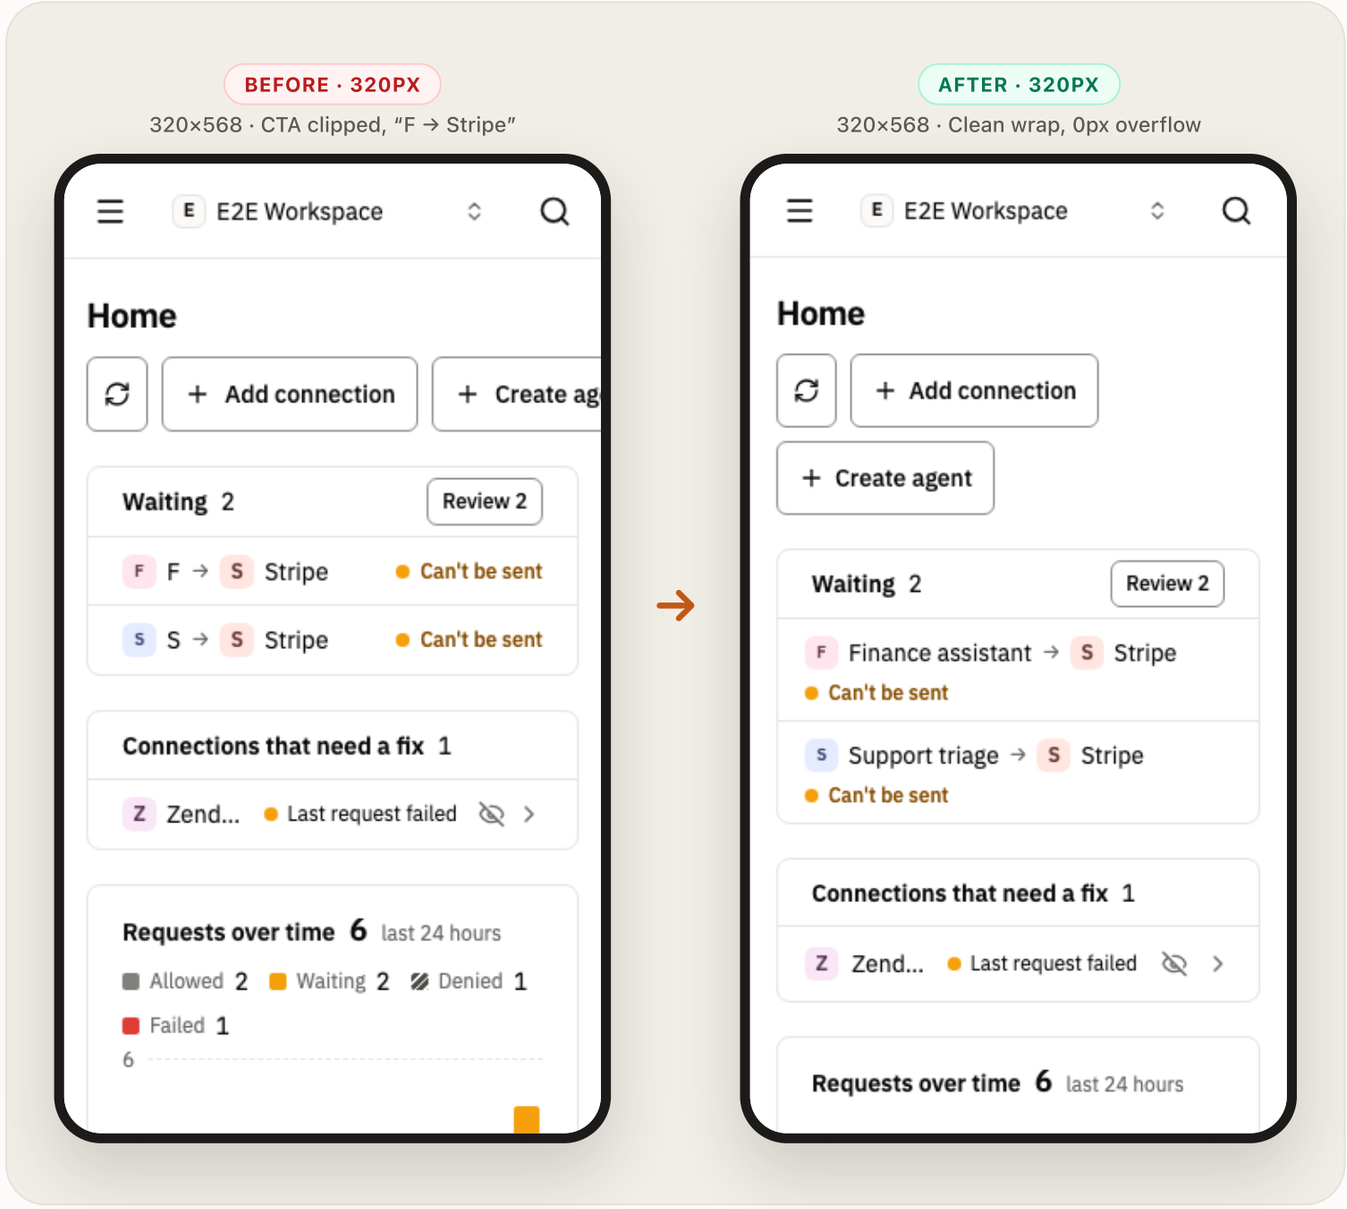

Even at iPhone SE (320×568), header actions, waiting approvals, and chart controls stay intact.

BEFORE (MAIN @ 320PX)

"+ Create age..." clipped off the right edge, agent names collapsed to single letters (`F → Stripe`), and chart legend items jammed onto tiny sub-20px targets.

AFTER (@ 320PX & 390PX)

`PageHeader` wraps actions cleanly with 0px clipping, waiting rows show readable agent names, and `OutcomeLegend` switches to a 2-col **44px** touch-target grid.

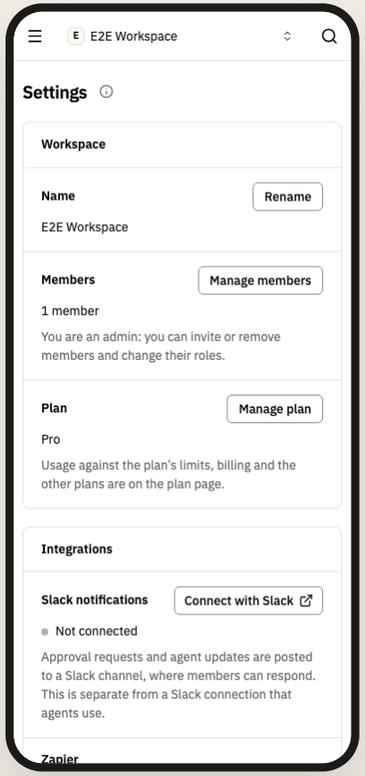

08 / SETTINGS & SHEET POLISH

Settings Rows & Policy Rule Picker

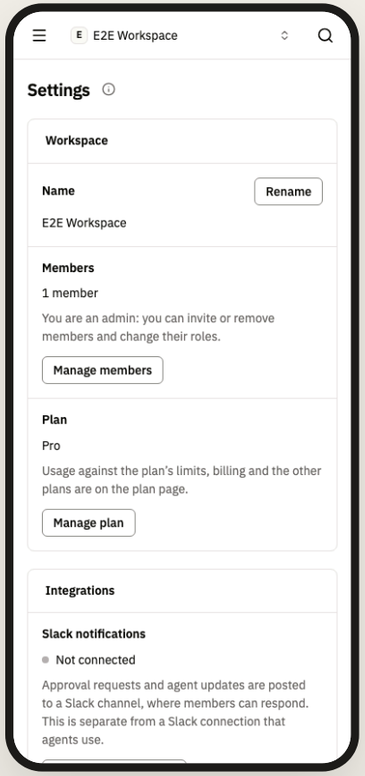

Consistent mobile touch ergonomics across settings cards, stacked action sheets, and rule editors (44px Edit/Remove spacing).

Workspace Settings

BEFORE

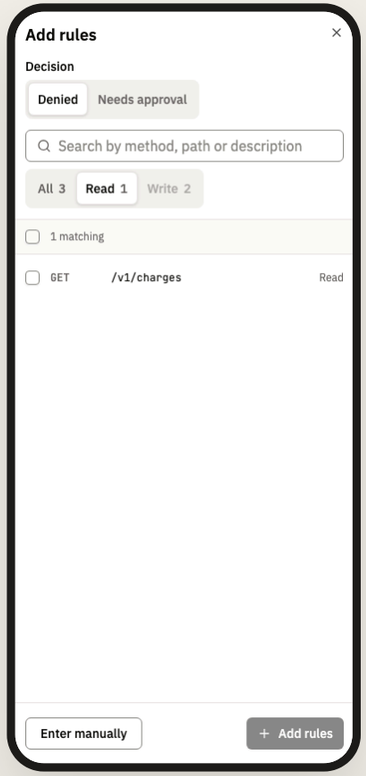

AFTER

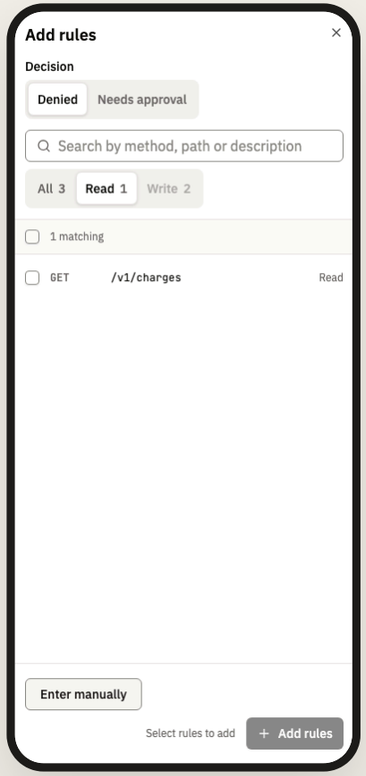

`SettingsRow` drops crowded right-aligned buttons cleanly below descriptions on narrow phones.

Add Policy Rules Sheet

BEFORE

AFTER

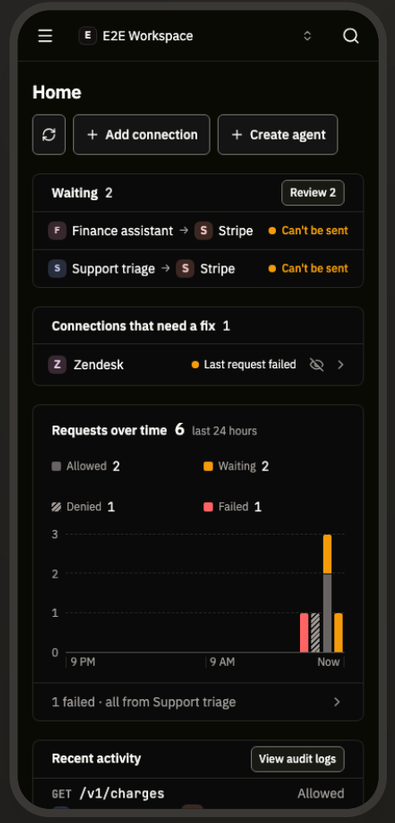

Full-width responsive sheet footer keeps status guidance and primary CTA crisp without awkward wrapping.

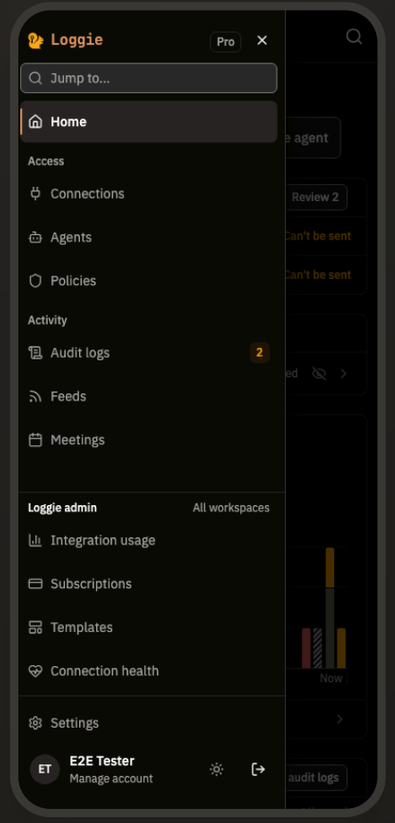

09 / DARK MODE & DESKTOP SAFETY
